ansible-lint Ansible linter

CONCEPTS

Without paths it auto-detects the project from the git root and lints playbooks, roles and collections it finds.

min loads at all
↓ +
basic style, syntax
↓ +
moderate readability
↓ +
safety deterministic
↓ +
shared for Galaxy
↓ +
production for AAP

Profiles are cumulative: each one includes the rules of the previous

RUN IT

ansible-lint
Lint the project (auto-detect)

ansible-lint *<file> <dir>*
Lint given files or folders

ansible-lint --fix
Apply all safe auto-fixes

ansible-lint --fix=*<rule>*,*<tag>*
Fix only chosen rules or tags

ansible-lint --profile *<name>*
Check a profile's rule set

ansible-lint --exclude *<path>*
Skip files or folders

ansible-lint -c *<file>*
Use a specific config file

ansible-lint --offline
No requirement installs or schema refresh

ansible-lint -s
Fail on warnings too

ansible-lint --version
Show version and ansible-core

RULES AND PROFILES

ansible-lint -L
List all rules

ansible-lint -P
Describe the profiles

ansible-lint -x *<rule>*
Skip rules or tags

ansible-lint -w *<rule>*
Only warn for these rules

ansible-lint --generate-ignore
Write .ansible-lint-ignore baseline

OUTPUT

ansible-lint -f *<format>*
brief, full, md, pep8, quiet, json, sarif

ansible-lint -f json
Code Climate JSON on stdout

INLINE SKIPS

 # noqa: *<rule>*
Skip a rule on this line

CONFIG FILE

.ansible-lint
Default config, YAML in project root

profile: production
Default profile

exclude_paths: [*<path>***]**
Paths never linted

skip_list: [*<rule>***]**
Rules never reported

COMMON RULES

fqcn
Use fully qualified module names

name[missing]
Tasks need a name

yaml
YAML style (via yamllint)

no-changed-when
command/shell need changed_when
