CONCEPTS

Keys act on the image under the mouse pointer; with none hovered they act on the selection.

Press H in any view to list the shortcuts active there. Everything is rebindable in preferences > shortcuts.

Edits are non-destructive: they live in the history stack and an XMP sidecar, never in the raw file.

Shortcuts are the defaults of the 5.6 / development manual; older releases can differ.

VIEWS

L Lighttable: browse and cull

D
Darkroom: develop the image
From the lighttable it opens the hovered or first selected image.

T
Tethering: shoot from camera
