CONCEPTS

Emacs writes C-x as Ctrl+X and M-x as Alt+X (Meta). A space separates steps: Ctrl+X Ctrl+F means press Ctrl+X, release, then Ctrl+F.

No Alt key (terminal, macOS)? Press Esc, release, then the key: Esc x is Alt+X. On macOS set Option as Meta in your terminal.

Buffers hold the text, windows only show them. Closing a window (Ctrl+X 0) does not kill its buffer.
