fish shell Friendly interactive shell

START HERE

Right
Accept the grey suggestion

fish_add_path *<dir>*
Add a directory to PATH

Tab
Complete and open the pager

fish_config
Pick prompt and theme

abbr -a *<name> <text>*
Short name that expands

set -gx *<NAME> <value>*
Export a variable

function *<name>* **... end**
Define a function

funcsave *<name>*
Keep a function for good

CONCEPTS

fish suggests, highlights and completes out of the box. Most setup is a few lines in config.fish, not a plugin framework.

Universal -U all sessions, saved
Global -g this shell
Function -f inside a function
Block -l inside if/for/begin

set scope, widest to narrowest

fish is not POSIX: no word splitting, no $VAR=x, no heredocs. Run bash scripts with bash, not by sourcing them.

Single quotes expand nothing; double quotes expand $var and $(cmd). Unquoted lists expand to one argument per element.

SUGGESTIONS & COMPLETION

Right / Ctrl+F
Accept the whole autosuggestion

Alt+Right / Alt+F
Accept one word of the suggestion

Tab
Complete; with several matches open the pager

~/.config/fish/completions/*<cmd>***.fish**
Where your own completions live

COMMAND-LINE KEYS

Ctrl+A / Ctrl+E
Start / end of line

Ctrl+W
Delete the previous path component

Ctrl+U
Delete to start of line

Ctrl+L
Clear the screen, keep the line

Ctrl+C
Cancel the current line

Ctrl+D
Delete char; exit on an empty line

Alt+E
Edit the line in $EDITOR

Alt+S
Prepend sudo to the line

Alt+H
Show the man page for this command

fish_vi_key_bindings
Switch to vi key bindings
Go back with fish_default_key_bindings. Esc leaves insert mode.

HISTORY & DIRECTORIES

Up / Down
Search history for what you typed

Ctrl+R
Open history in the pager

HISTORY & DIRECTORIES (cont.)

history search *<text>*
List matching history entries

VARIABLES & LISTS

set *<name> <value>*
Set a variable

set -gx *<NAME> <value>*
Set global and export

set -U *<name> <value>*
Universal: kept across sessions

set -l *<name> <value>*
Local to the current block

set -q *<name>*
Succeeds if the variable is set

fish_add_path *<dir>*
Add a directory to PATH (saved)

set *<name>* **a b c**
A variable is a list

$name[2]
Element 2 (lists start at 1)

$status
Exit status of the last command

$argv
Arguments of the function or script

EXPANSION

(*<cmd>***)**
Command substitution, one arg per line

****/*.txt**
Recurse into subdirectories

CONTROL FLOW

Conditions

```
if test -f <file>
    echo yes
else if test -d <file>
    echo dir
else
    echo no
end
```

Loops

```
for f in *.txt
    echo $f
end

while read -l line
    echo $line
end < <file>
```

test -e *<path>*
True if the path exists

*<a>***; and** *<b>*
Run b only if a succeeds
&& and || work too. not <cmd> negates a command.

math *<a>* **+** *<b>*
Arithmetic, floats included

FUNCTIONS & ABBREVIATIONS

function *<name>* **... end**
Define a function ($argv holds args)

funcsave *<name>*
Save a function to ~/.config/fish/functions

abbr -a *<name> <text>*
Expand name to text on space or Enter

Ctrl+Space
Space without expanding the abbreviation

STRINGS

string match -r '*<regex>***'** *<text>*
Regex match, prints the match

string replace -a *<old> <new> <text>*
Replace all occurrences

string split *<sep> <text>*
Split into list items

REDIRECTION & PIPES

<cmd> **>** *<file>*
Stdout to a file

<cmd> **>>** *<file>*
Append stdout

<cmd> **2>** *<file>*
Stderr to a file

<cmd> **&>** *<file>*
Stdout and stderr to a file

fish has no heredoc: pipe from printf or use a quoted multi-line string.

CONFIG & PROMPT

~/.config/fish/config.fish
Runs at every start

~/.config/fish/functions/*<name>***.fish**
Autoloaded one function per file

fish_config
Web UI for prompt and theme

COMING FROM BASH

bash to fish

bash	fish
`export X=1`	`set -gx X 1`
`$?`	`$status`
`$(cmd)`	`(cmd) or $(cmd)`
`${v/a/b}`	`string replace a b $v`
`$((1+2))`	`math 1 + 2`
`<(cmd)`	`(cmd | psub)`
`[[ $a == b ]]`	`test $a = b`
`f() { ...; }`	`function f ... end`
`cmd1 && cmd2`	`cmd1; and cmd2`

Unquoted $var never splits on spaces and a glob with no match is an error, not passed through literally.

RECIPES

Starter config.fish

```
# ~/.config/fish/config.fish
fish_add_path ~/.local/bin
set -gx EDITOR vim
abbr -a gco git checkout
abbr -a gs git status
set -g fish_greeting
```

Function with options

```
function greet -d 'Say hello'
    argparse 'n/name=' -- $argv
    echo Hello $_flag_name
end
funcsave greet
```

Rename in bulk

```
for f in *.jpeg
    mv $f (string
replace .jpeg .jpg $f)
end
```
