GitUI Fast terminal git UI

START HERE

- `1-5` Switch tab
- `h` Help popup
- `Enter` Stage / unstage file
- `q` Quit
- `c` Commit staged changes
- `p` Push
- `f` Pull
- `b` Branch list

Status tab: files left, diff right

CONCEPTS

Press h anywhere for a help popup that lists the keys valid in the current view. The bottom bar shows the most useful ones; . toggles it.

Capital letters mean Shift+letter (D is Shift+d). Keys can be remapped in key_bindings.ron.

TABS AND NAVIGATION

`1` Status: working tree and index

`2` Log: commit history

`3` Files: browse the tree at HEAD

`4` Stashing: create a stash

`5` Stashes: list of stashes

`Tab` / `Shift` + `Tab` Next / previous tab

`Up` / `Down` Move selection

`Left` / `Right` Collapse or expand, or change focus

TABS AND NAVIGATION (cont.)

`Home` / `End` Jump to first / last entry

`PageUp` / `PageDown` Scroll by a page

`Esc` Close popup

`q` Quit

`h` Show help popup

`o` Open options popup

Toggles settings such as whitespace in diffs and the number of context lines.

STATUS AND STAGING

`Enter` Stage or unstage selected file

`a` Stage all changes

`c` Open the commit popup

`D` Discard changes of the selected file

Asks for confirmation; discarded changes cannot be recovered.

`e` Open file in your editor

STATUS AND STAGING (cont.)

`i` Add file to .gitignore

`w` Switch between workdir and staged view

`Tab` Move focus between file lists and diff

`U` Undo last commit (soft reset)

`B` Blame the selected file

`H` Show history of the selected file

DIFF VIEW

`Right` Focus the diff pane

`Enter` Stage or unstage the selected hunk

`n` / `p` Next / previous hunk

`Up` / `Down` Move line cursor

`Shift` + `Up` / `Shift` + `Down` Extend line selection

`s` Stage the selected lines

DIFF VIEW (cont.)

`d` Discard the selected lines

COMMIT

`Enter` Commit with the entered message

`Ctrl` + `a` Amend the previous commit

`Ctrl` + `e` Write message in your editor

`Esc` Cancel the commit

LOG

`Enter` Show files changed in the commit

`Space` Mark commit

`Shift` + `Down` Select several commits

`y` Copy commit hash

`t` Tag the commit

`T` Show tags

`r` Reword the commit message

`S` Check out the commit

LOG (cont.)

`R` Reset branch to the commit

`f` Search commits

BRANCHES

`b` Open branch list

`Enter` Check out the selected branch

`c` Create a branch

`r` Rename the branch

`D` Delete the branch

`m` Merge the branch into HEAD

`Left` / `Right` Switch local and remote lists

REMOTE AND STASH

`p` Push current branch

`P` Force push

Overwrites remote history; use deliberately.

`f` Pull from remote

`F` Fetch from remotes

REMOTE AND STASH (cont.)

`s` Stash changes (Stashing tab)

`u` Include untracked files in stash

`Enter` Pop selected stash (Stashes tab)

`a` Apply selected stash

`D` Drop selected stash

CONFIG

Config dir: ~/.config/gitui (Linux, macOS) or %APPDATA%/gitui (Windows). Linux uses $XDG_CONFIG_HOME if set. Run gitui -l to log to ~/.cache/gitui/gitui.log.

RECIPES

Commit part of a file

```
# Status tab: select the file
Right
# move to lines, Shift+Down to
extend
s
Esc
c
# type message, then Enter
```
