GitLab CLI GitLab from the terminal

CONCEPTS

Inside a clone, glab finds the project from the git remote. Use -R <group>/<project> to target another one.

Branch local commits
↓ `glab mr create`
Merge request review and approval
↓ `glab mr merge`
Merged target branch
↓ `glab ci status`
Pipeline CI/CD jobs

AUTH AND SETUP

`glab auth login`
Sign in interactively (OAuth or token)

`glab auth status`
Show which account and host you use

MERGE REQUESTS

`glab mr create --fill`
Open an MR with title from commits

`glab mr create --fill --push --yes`
Push, create, skip all prompts

`glab mr create -t "<title>" -b <branch> --draft`
Draft MR into a target branch

`glab mr list`
List open MRs

`glab mr list --assignee=@me`
MRs assigned to you

`glab mr list --reviewer=@me`
MRs waiting for your review

`glab mr view <id>`
Show an MR

`glab mr checkout <id>`
Check out an MR branch

`glab mr approve <id>`
Approve an MR

`glab mr merge`
Merge the MR of the current branch

MERGE REQUESTS (cont.)

`glab mr merge <id> --squash --remove-source-branch`
Squash-merge and delete the branch

ISSUES

`glab issue list`
List open issues

`glab issue create -t "<title>" -d "<text>"`
File an issue

`glab issue view <id>`
Show an issue

`glab issue list --assignee=@me`
Issues assigned to you

CI/CD

`glab ci status`
Pipeline status of this branch

`glab ci status --live`
Follow the pipeline until it ends

`glab ci view`
Interactive pipeline view

`glab ci trace <job-name>`
Stream a job's log

`glab ci run`
Start a pipeline on this branch

`glab ci run -b <branch> --variables <KEY>:<value>`
Run with CI variables

`glab ci lint`
Validate .gitlab-ci.yml

REPOSITORIES

`glab repo clone <group>/<project>`
Clone a project

API

`glab api projects/:fullpath/releases`
GET an endpoint for this project
