GNOME Linux desktop shell

CONCEPTS

> Super is the Windows (or logo) key. In the overview just start typing: apps, files and settings are searched, Enter opens the first hit.

> Workspaces are dynamic: there is always one empty workspace at the end, and empty ones in between disappear.

> Every default can be changed in Settings > Keyboard > View and Customize Shortcuts; Backspace in the dialog resets a shortcut.

OVERVIEW AND APPS

Super
Toggle the Activities overview
