Selection-first modal editor

CONCEPTS

Selection first, then verb: w selects a word, d deletes it. There is no operator-pending state like in Vim.

Uppercase movement extends the selection: w picks a word, W adds the next.

Notation as in the docs: <c-x> is Ctrl+x, <a-x> is Alt+x.

Commands act on all selections at once: s then c is a multi-cursor rename.

MODES & FILES

`<esc>`
Back to normal mode; drop extra selections

`i` / `a`
Insert before / after selection

`I` / `A`
Insert at line start / end

`o` / `O`
