Konsole KDE terminal emulator

Window one Konsole window
Tab one or more sessions
Split view a view of a session
Profile font, colours, scrolling

CONCEPTS

Terminal programs own plain Ctrl keys, so Konsole puts its shortcuts on Ctrl+Shift. Shift+Left/Right switches tabs without Ctrl.

Splits are views: split view shows every tab in each half, with output duplicated. For independent shells use tabs or separate windows.

Missing a key? Settings > Configure Keyboard Shortcuts rebinds everything, including entries with no default such as Clone Tab.

TABS AND WINDOWS

Ctrl + Shift + T New tab

Ctrl + Shift + N
New window

Ctrl + Shift + W
Close current session
