Konsole KDE terminal emulator

CONCEPTS

Terminal programs own plain Ctrl keys, so Konsole puts its shortcuts on Ctrl+Shift. Shift+Left/Right switches tabs without Ctrl.

Window one Konsole window
- **Tab** one or more sessions
  - **Split view** a view of a session
    - **Profile** font, colours, scrolling

Splits are views: split view shows every tab in each half, with output duplicated. For independent shells use tabs or separate windows.

TABS AND WINDOWS

Ctrl + Shift + T
New tab

Ctrl + Shift + N
New window

Ctrl + Shift + W
