Lefthook Fast git hooks manager

CONCEPTS

Hooks are read from lefthook.yml on every git event, so editing the config needs no reinstall.

git commit git event
↓ runs .git/hooks
lefthook run reads lefthook.yml
↓ filters files
Jobs glob, skip, root
↓ exit code
Commit allowed or aborted

Run lefthook install after cloning; the npm package does it for you in a postinstall script.

INSTALL & CLI

brew install lefthook
Install with Homebrew

npm install lefthook --save-dev
Install as a dev dependency

lefthook install
Install hooks, create lefthook.yml if missing

lefthook install *<hook>* **...**
Install only some hooks

lefthook install --force
Install even if core.hooksPath is set

lefthook uninstall
Remove hooks lefthook installed

lefthook add *<hook>* **--dirs**
Add a hook and its script directory

lefthook validate
Check the config for errors

lefthook dump
Print the merged configuration

RUNNING

lefthook run *<hook>*
Run a hook's jobs now

RUNNING (cont.)

lefthook run *<hook>* **--all-files**
Treat all tracked files as input

git commit --no-verify
Bypass pre-commit and commit-msg hooks

LEFTHOOK=0 git *<cmd>*
Disable lefthook for one command

HOOK & JOB OPTIONS

pre-commit:
Hook name as top-level key

jobs: [{name, run}]
Ordered list of tasks in a hook

run: *<shell command>*
Command to execute (via sh)

parallel: true
Run a hook's jobs concurrently

FILES & PLACEHOLDERS

{staged_files}
Files staged for this commit

{push_files}
Commits not yet pushed, as files

glob: "*.{js,ts}"
Only run for matching files

exclude: [*<glob>***]**
Leave matching files out

stage_fixed: true
git add files after the job (pre-commit)

SKIPPING & CONDITIONS

skip: true
Disable a job or hook

skip: [merge, rebase]
Skip in merge or rebase state

lefthook-local.yml
Personal overrides, not committed
