Midnight Commander

Two-panel file manager

CONCEPTS

Two panels: source and target

Copy and move go from the active panel to the other one; the dialog lets you change the target.

No function keys (terminal or desktop grabs them)? Press Esc, then 1-9 or 0 for F1-F10.

Enter runs the command line if you typed something; on an empty line it opens the file or directory.

Alt is Meta; if your terminal has none, press Esc first, then the key.

In the viewer: F2 toggles wrap, F4 hex mode, F5 goto line, F8 raw view. F10 leaves viewer and editor.

FUNCTION KEYS

F1 Help

F2 User menu

F3 View file

F4 Edit file

F5 Copy

F6 Move / rename

F7 Make directory

F8 Delete

F9 Open menu bar

REMOTE AND OPTIONS

Remote paths (type via Alt+C)

Path	Meaning
`sftp://user@host/dir`	SFTP, port 22 default
`sh://user@host/dir`	Shell link over ssh
`ftp://host/dir`	FTP, anonymous by default

mc › -e › <file>
Open straight in editor

RECIPES

Copy between two dirs

```
mc /src /dst
# Insert on files (or + for a
pattern)
# F5, confirm target, Enter
```

Edit a file on a server

```
# Alt+C, type: sftp://user@host/
etc
# select file, F4, edit, F2 to
save
```
