ncmpcpp Terminal MPD client

START HERE

ncmpcpp
Start the client

p
Pause / resume

1 / **2** / **4**
Playlist / Browser / Library

> / **<**
Next / previous track

Enter
Play the selected item

/
Search the list

Space
Add item to the playlist

q
Quit (MPD keeps playing)

Library / Browser screens 2, 4 — Space / a → **Playlist** screen 1 — Enter → **MPD** plays, port 6600

CONCEPTS

ncmpcpp is only a client: MPD does the playing, so music continues after you quit.

Keys act on the current screen; one key can mean different things on different screens.

F1 shows the keys currently bound; they can be changed in ~/.config/ncmpcpp/bindings.

Needs a running MPD. Use -h and -p to reach one on another host or port.

SCREENS

I Show artist info

P Toggle display mode

INTERFACE

**** Toggle the interface layout

INTERFACE (cont.)

U
Keep the playing song centred

Toggle bitrate display

!
Toggle separators between albums

Ctrl + **L** Lock the screen

| Toggle mouse support

q Quit

COMMAND LINE

ncmpcpp -h *<host>* **-p** *<port>*
Connect to another MPD

ncmpcpp -s *<screen>*
Start on a given screen

ncmpcpp -c *<file>*
Use another config file

ncmpcpp -b *<file>*
Use another bindings file

ncmpcpp --current-song
Print the current song and exit

ncmpcpp --current-song="{%a - %t}"
Print it in a chosen format

ncmpcpp -q
Suppress logs and extra output

ncmpcpp -v
Show version

mpc toggle / next / prev
Control MPD without the UI

RECIPES

Build a playlist from the library

```
ncmpcpp
# 4: pick artist, Right, pick album
# B selects the album, Space adds it
# 1: Enter plays, S saves it
```

Show the song in a status bar

```
ncmpcpp --current-song="{%a - %t}"
```

Find and queue a track

```
# 3: type the query, y searches
# Space adds a result
# 1: Enter plays
```

Keybinding for a music pane

```
# ~/.config/ncmpcpp/bindings
def_key "J"
  scroll_down
# F1 lists every default key
```
