Nushell Structured data shell

CONCEPTS

Pipelines pass typed data (tables, records, lists), not text, so filter by column instead of parsing with grep and awk.

Source ls, open, ps
↓ |
Table rows + columns
↓ where / select
Filtered still structured
↓ to json / save
Output text or file

Types: int, float, string, bool, filesize (1mb), duration (2hr), date, list, record, table, closure, nothing.

Nushell is not POSIX: no $VAR, no &&, no backtick substitution. External commands still run and return text.

NAVIGATE & FILES

ls
List files as a table

ls -a
Include hidden files

ls **/*.rs
Glob recursively

cd *<dir>*
Change directory

mkdir *<dir>*
Create directory with parents

OPEN & CONVERT

open *<file>*
Load file, parsed by extension

open --raw *<file>*
Read as plain text

save *<file>*
Write pipeline to file

from json / from yaml / from csv
Parse text into data

to json / to yaml / to csv
Render data as text

http get *<url>*
Fetch URL, parse JSON

FILTER & SHAPE

where *<col>* == *<val>*
Keep matching rows

select *<col>* *<col>*
Keep columns

reject *<col>*
Drop columns

get *<col>*
Pull out column or field

get a.b.0
Cell path into nested data

sort-by *<col>*
Sort rows

sort-by -r *<col>*
Sort descending

first *<n>* **/ last** *<n>*
Take rows from either end

each {|x| ... }
Map over items

update *<col>* **{|r| ... }**
Change a column

insert *<col>* **{|r| ... }**
Add a new column

STRINGS & TEXT

$"hello ($name)"
Interpolate expressions

str replace *<a>* *<b>*
Replace text

split row *<sep>*
String to list

lines
Split text into lines

VARIABLES & FLOW

let *<name>* = *<value>*
Immutable variable

mut *<name>* = *<value>*
Mutable variable

if *<cond>* **{ } else { }**
Conditional (an expression)

for i in 1..5 { print $i }
Loop over range or list

try { } catch { }
Handle errors

VARIABLES & FLOW (cont.)

$in
Pipeline input inside a block

COMMANDS & MODULES

def *<name>* **[x: int] { }**
Custom command

def *<name>* **[--flag, --opt: string] { }**
Flags and options

{|x| $x * 2 }
Closure

help commands
Search all commands

help *<command>*
Help for one command

ENVIRONMENT & CONFIG

$env.FOO = "bar"
Set environment variable

$env.PATH ++= ["~/bin"]
Append to PATH

config nu
Edit config.nu

EXTERNALS & I/O

^*<cmd>*
Force the external command

cmd | complete
Capture stdout, stderr, exit code

BASH TO NUSHELL

Common translations

Bash	Nushell
`export FOO=bar`	`$env.FOO = "bar"`
`echo $FOO`	`$env.FOO`
`a && b`	`a; b`
`a || b`	`try { a } catch { b }`
`echo "x $(cmd)"`	`$"x (cmd)"`
`cmd | head -5`	`cmd | first 5`
`cat file`	`open --raw file`
`unset FOO`	`hide-env FOO`
`find . -name '*.rs'`	`ls **/*.rs`
`cmd > file 2>&1`	`cmd o+e> file`
