PM2 Node process manager

CONCEPTS

PM2 runs a background daemon that owns your apps: closing the terminal does not stop them.

pm2 CLI your commands
↓ talks to
PM2 daemon keeps apps alive
↓ spawns
Your apps fork or cluster
↓ write to
Log files ~/.pm2/logs

The process list lives in the daemon's memory; pm2 save plus pm2 startup make it survive a reboot.

START AND RUN

pm2 start *<file>*
Start an app as a daemonized process

pm2 start *<file>* **--name** *<name>*
Start under a custom name

pm2 start *<file>* **--watch**
Restart when files change

pm2 start *<file>* **--max-memory-restart** *<size>*
Restart above a memory limit

INSPECT AND LOGS

pm2 list
Table of all processes

pm2 logs
Stream logs of all apps

pm2 logs *<name>*
Stream logs of one app

pm2 monit
Live CPU, memory and logs

pm2 logs --lines *<n>*
Show the last n lines first

pm2 describe *<name>*
All details of one process

CONTROL

pm2 restart *<name>*
Kill and start again

pm2 stop *<name>*
Stop but keep in the list

pm2 delete *<name>*
Stop and remove from the list

pm2 reload *<name>*
Zero-downtime restart

pm2 restart all
Restart every app

pm2 stop all
Stop every app

pm2 restart *<name>* **--update-env**
Restart with the current shell env

CLUSTER MODE

pm2 start *<file>* **-i max**
One instance per CPU core

pm2 start *<file>* **-i** *<n>*
Run n load-balanced instances

pm2 scale *<name>* *<n>*
Set the instance count

ECOSYSTEM FILE

pm2 ecosystem
Generate ecosystem.config.js

pm2 start ecosystem.config.js
Start all apps in the file

pm2 start ecosystem.config.js --env *<name>*
Use the env_<name> block

BOOT AND UPKEEP

pm2 startup
Print the boot-hook command to run

pm2 save
Save the list for resurrect

pm2 install pm2-logrotate
Rotate log files
