pnpm Fast Node package manager

CONCEPTS

pnpm keeps one content-addressable store on disk and hard-links files into node_modules, so repeat installs are fast and cheap.

Registry npm packages
↓ fetch once
Global store shared files
↓ hard links
node_modules/.pnpm virtual store
↓ symlinks
node_modules direct deps only

node_modules holds only your direct dependencies, so code that imports an undeclared package fails instead of working by accident.
