CONCEPTS

Keys are for the Windows and Linux desktop app. A few (Ctrl+K, Ctrl+O, Ctrl+Q) work only in the desktop app, not in the browser.

On macOS read Ctrl as ⌘ and Alt as Option. Exceptions: Home view is Ctrl+1 and More is Ctrl+0; Back/Forward are ⌘+[and ⌘+]; workspace switching by number is ⌘+number.

Message actions (E, T, P, R…) work on a focused message: click it or arrow up to it first. They are plain letters, so they only fire when the message box is not focused.

Some symbol keys (backtick, number row) vary by keyboard layout; check Preferences if one does not respond.
