Ctrl + D
Add next match

Ctrl + /
Toggle comment

Ctrl + Shift + F
Find in files

Ctrl + B
Build

Window one project or folder set
Group a pane with its own tabs
View one open file, many selections

CONCEPTS

> Ctrl+P is the hub: add : for a line, @ for a symbol, # for a word after the file name.

> Multiple selections are the core idea: edit many places at once, then press Esc to return to one cursor.

> Shortcuts shown are for Windows and Linux. On macOS read Ctrl as Cmd and Alt as Option; some keys differ (multi-cursor, build cancel).

> Chords like Ctrl+K Ctrl+B: press Ctrl+K, release, then Ctrl+B.

GENERAL

Ctrl + Shift + P
Command palette
Fuzzy-search any command, syntax, or package action.

Ctrl + P
Goto Anything: open file
Type part of a name; the preview shows before you confirm.

RECIPES

Multi-line edit

```
# Select the lines, then:
Ctrl+Shift+L   # one cursor per line
End            # jump to each line end
Esc            # done
```

Rename a variable in file

```
# Put cursor on the word
Alt+F3         # select every match
# type the new name, then Esc
```

Use as git editor

```
export EDITOR='subl -w'
git commit
```
