terraform-docs

Terraform module docs

CONCEPTS

It reads your .tf files only: no init or credentials needed. Descriptions in variables and outputs become the docs.

Module .tf files variables, outputs
↓ parse
terraform-docs format + sections
↓ render
Output stdout or file
↓ inject
README.md between markers

Boolean flags need the equals form: --lockfile=false. A space gives 'accepts 1 arg(s), received 2'.

INSTALL

brew install terraform-docs
Install with Homebrew

go install github.com/terraform-docs/terraform-docs@<*version*>
Install with Go

scoop install terraform-docs
Install on Windows (Scoop)

docker run --rm -v "$(pwd):/terraform-docs" -u $(id -u) quay.io/terraform-docs/terraform-docs:<*version*> **markdown / terraform-docs**
Run from the Docker image

terraform-docs version
Print installed version

FORMATS

terraform-docs markdown table <*path*>
Markdown with tables

terraform-docs markdown document <*path*>
Markdown with headings per item

terraform-docs json <*path*>
JSON for scripts

terraform-docs pretty <*path*>
Readable terminal output

terraform-docs tfvars hcl <*path*>
Generate a terraform.tfvars template

SECTIONS

--show <*section*>
Show only the named section

--hide <*section*>
Hide a section

--hide providers,footer
Hide several at once

--sort-by <*name|required|type*>
Sort inputs by this key

OUTPUT TO FILE

--output-file <*file*>
Write result into a file

--output-mode inject
Replace only the marked block

--output-check
Exit non-zero if file is out of date

SUBMODULES

--recursive
Document submodules too

CONFIG FILE

-c, --config <*file*>
Use a specific config file

formatter: "markdown table"
Choose format (only required key)

sections: { show: [...], hide: [...] }
Pick visible sections

output: { file: README.md, mode: inject }
Where and how to write

IGNORE BLOCKS

 # terraform-docs-ignore
Leading comment hides a block
