TFLint Terraform linter

CONCEPTS

TFLint checks Terraform code for mistakes terraform validate misses: bad instance types, deprecated syntax, unused declarations.

.tflint.hcl plugins and rules
↓ `tflint --init`
Plugins rulesets on disk
↓ `tflint`
Rules run on your .tf files
↓ `exit code`
Issues error / warning / notice

The terraform ruleset is bundled and on by default; cloud rulesets (aws, azurerm, google) are plugins you must declare and install.

Run tflint from the module directory, or pass --chdir: it reads .tf files and config from there, not from parent dirs.
