Tekton CLI Tekton pipelines CLI

CONCEPTS

tkn talks to whichever cluster and namespace kubectl currently points at. Pass -n <ns> or -c <ctx> to override, and check them before deleting.

Pipeline ordered tasks
↓ start
PipelineRun one execution
↓ creates
TaskRun per task
↓ runs
Pod one step per container

Definitions are reusable; each start creates a run

PIPELINES

tkn pipeline list
List pipelines

tkn pipeline describe *<name>*
Params, workspaces, tasks, recent runs

tkn pipeline start *<name>*
Start a run (prompts for params)

tkn pipeline start *<name>* **-p** *<key>*=*<val>*
Pass a parameter

tkn pipeline start *<name>* **--showlog**
Start and stream logs

tkn pipeline start *<name>* **--use-param-defaults**
Skip param prompts

tkn pipeline start *<name>* **-L**
Rerun with last run's values

tkn pipeline start -f *<file>*
Start from a local or remote file

WORKSPACES

-w name=*<ws>***,emptyDir=**
Scratch dir for the run

-w name=*<ws>***,claimName=***<pvc>*
Bind an existing PVC

PIPELINERUNS

tkn pr list
List runs

tkn pr describe *<run>*
Status, params, task runs

tkn pr describe --last
Describe newest run

tkn pr logs *<run>*
Show run logs

tkn pr logs *<run>* **-f**
Stream logs live

tkn pr logs --last
Logs of newest run

tkn pr logs *<run>* **--log-failed**
Only failed tasks and steps

tkn pr cancel *<run>*
Cancel a running run

tkn pr delete *<run>*...
Delete runs by name

tkn pr delete --keep *<n>*
Keep the n newest

TASKS

tkn task list
List tasks

tkn task describe *<name>*
Params, steps, recent runs

tkn task start *<name>*
Start a task run

tkn task start *<name>* **-p** *<key>*=*<val>* **--showlog**
Pass params and follow

TASKRUNS

tkn tr list
List task runs

tkn tr describe *<run>*
Steps, status, results

tkn tr logs *<run>* **-f**
Stream logs live
