Zed Linux / Windows shortcuts

Window one project or workspace
Pane a split with its own tabs
Editor one open buffer

CONCEPTS

Ctrl+Shift+P and type: nearly every action is a palette command, and it shows the key bound to it.

Keys shown are Linux/Windows defaults. On macOS read Ctrl as Cmd and Alt as Option; Zed lists the exact Mac key in the palette.

Panels (project, git, outline, agent, terminal) live in the left, right or bottom dock; toggle each dock as a whole.

GENERAL
