zypper openSUSE package manager

CONCEPTS

Every command has a short alias: in, rm, se, if, up, lu, lr, ar, ref, pch. Global options such as -n and --no-refresh go before the command.

Repositories /etc/zypp/repos.d
↓ refresh
Solver libzypp, one transaction
↓ confirm, download
RPM transaction install / remove / update
↓ logged
History /var/log/zypp/history

update only moves to newer versions inside the current repos and never changes vendor or removes packages. dup (dist-upgrade) may switch vendor, downgrade or remove: use it on Tumbleweed and for release upgrades.
